

Re: Second round of comments by the eWG on Draft s/2da ronda de comentarios del GTe sobre Proyecto de norma para la quin

by [REDACTED] Fri Dec 14, 2018 4:46 pm

Brazil concurs with the values for Quinoa as proposed and would like to express disagreement on the footnote nr 1.

Brazil is not in favor that international Standards refers to national regulations, moreover if lower limits are always within upper limits, the footnote maybe not needed at all.

We propose the deletion/removal of the footnote nr 1 *Lower moisture limits should be required for certain destinations in relation to the climate, duration of transport, and storage. Governments accepting the standard are requested to indicate and justify the requirements in force in their country.*
