

**SIX-MONTHLY REPORT ON THE NOTIFICATION OF THE PRESENCE OF OIE-LISTED DISEASES**

OIE Reference: 148770

Report period: Jul-Dec 2019

Country: Brazil

**Report Summary**

<b>Animal type</b>	Terrestrial	<b>Date of report</b>	16/03/2020
<b>Submitted</b>	Yes	<b>Report Period:</b>	Jul-Dec 2019
<b>Name of sender of the report</b>	Geraldo Marcos De Moraes	<b>Address</b>	Esplanada dos Ministérios, Bloco D Anexo A, 3º Andar, Sala: 301 CEP 70.043-900 Brasília
<b>Position</b>	Director	<b>Telephone</b>	+55 61 3218 2709
<b>Email</b>	geraldo.moraes@agricultura.gov.br	<b>Fax</b>	+55 61 32 18 27 29
<b>Entered by</b>	Parreiras Mourão Márcia Letícia		

**1. Summary on OIE-listed diseases/infections present in Brazil**

#### Classical swine fever - NOTE:

En Brasil se consideran dos zonas con distinta situación zoosanitaria respecto a la Peste Porcina Clásica (PPC). Una zona libre (Provincias de Rio Grande do Sul, Santa Catarina, Acre, Bahia, Espírito Santo, Goias, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Paraná, Rio de Janeiro, Rondônia, São Paulo, Sergipe , Tocantins, Distrito Federal y los municipios de Guajará y Boca do Acre, la parte sur del municipio de Canutama y la parte sudoeste del municipio de Lábrea en la Provincia de Amazonas) y otra zona no libre o infectada (Provincias de Alagoas, Amapá, Amazonas, Ceará, Maranhão, Pará, Paraíba, Pernambuco, Piauí, Rio Grande do Norte y Roraima). Desde octubre de 2018, la intensificación de la vigilancia en la zona no reconocida como libre de PPC en Brasil llevó a la detección de sospechas y confirmación de focos de PPC en la Provincia de Ceará y en el 2019, también en Piauí. La vigilancia para la detección de sospechas de PPC sigue en todo el país, siendo prohibida la mobilización de animales y productos de riesgo de la zona infectada hacia la zona libre.

In Brazil, two zones with different animal health situation are considered regarding classical swine fever (CSF). A free zone (provinces of Rio Grande do Sul, Santa Catarina, Acre, Bahia, Espírito Santo, Goias, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Paraná, Rio de Janeiro, Rondônia, São Paulo, Sergipe, Tocantins, the Federal District and the municipalities of Guajará and Boca do Acre, the southern part of the municipality of Canutama and the southwestern part of the municipality of Lábrea in the province of Amazonas) and a non-free or infected zone (provinces of Alagoas, Amapá, Amazonas, Ceará, Maranhão, Pará, Paraíba, Pernambuco, Piauí, Rio Grande do Norte and Roraima). Since October 2018, the strengthening of surveillance in the area not recognized free of CSF in Brazil led to the detection of suspected cases and confirmation of CSF outbreaks in the province of Ceará and, in 2019, in Piauí. Surveillance aimed at detecting suspected cases of CSF continues throughout the country, movements of animals and products at risk are prohibited from the infected zone to the free zone.

Au Brésil, deux zones de statut sanitaire différent se distinguent au regard de la peste porcine classique (PPC). Une zone indemne (provinces de Rio Grande do Sul, Santa Catarina, Acre, Bahia, Espírito Santo, Goias, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Paraná, Rio de Janeiro, Rondônia, São Paulo, Sergipe, Tocantins, le District fédéral et les communes de Guajará et Boca do Acre, la partie sud de la commune de Canutama et la partie sud-ouest de la commune de Lábrea dans la province de l'Amazonas) et une autre non-indemne ou atteinte (provinces d'Alagoas, Amapá, Amazonas, Ceará, Maranhão, Pará, Paraíba, Pernambuco, Piauí, Rio Grande do Norte et Roraima). Depuis octobre 2018, la surveillance renforcée menée dans la zone non-indemne de PPC au Brésil a permis de détecter des suspicions et de confirmer des foyers de PPC dans la province de Ceará et, en 2019, dans la province de Piauí. La surveillance destinée à détecter des suspicions de PPC se poursuit dans tout le pays, les déplacements d'animaux et de produits à risque étant interdits depuis la zone infectée vers la zone indemne.

OIE-Listed disease	occurrence	Serotype(s)	New outbreaks	Total outbreaks	Species	Control Measures	Official vaccination	Measuring units	Susceptible	Cases	Deaths	Killed and disposed of	Slaughtered	Vaccination in response to the outbreak(s)

### Classical swine fever (Wild) - NOTE:

En Brasil se consideran dos zonas con distinta situación zoosanitaria respecto a la Peste Porcina Clásica (PPC). Una zona libre (Provincias de Rio Grande do Sul, Santa Catarina, Acre, Bahia, Espírito Santo, Goias, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Paraná, Rio de Janeiro, Rondônia, São Paulo, Sergipe, Tocantins, Distrito Federal y los municipios de Guajará y Boca do Acre, la parte sur del municipio de Canutama y la parte sudoeste del municipio de Lábrea en la Provincia de Amazonas) y otra zona no libre o infectada (Provincias de Alagoas, Amapá, Amazonas, Ceará, Maranhão, Pará, Paraíba, Pernambuco, Piauí, Rio Grande do Norte y Roraima). Desde octubre de 2018, la intensificación de la vigilancia en la zona no reconocida como libre de PPC en Brasil llevó a la detección de sospechas y confirmación de focos de PPC en la Provincia de Ceará y en el 2019, también en Piauí. La vigilancia para la detección de sospechas de PPC sigue en todo el país, siendo prohibida la mobilización de animales y productos de riesgo de la zona infectada hacia la zona libre.

In Brazil, two zones with different animal health situation are considered regarding classical swine fever (CSF). A free zone (provinces of Rio Grande do Sul, Santa Catarina, Acre, Bahia, Espírito Santo, Goias, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Paraná, Rio de Janeiro, Rondônia, São Paulo, Sergipe, Tocantins, the Federal District and the municipalities of Guajará and Boca do Acre, the southern part of the municipality of Canutama and the southwestern part of the municipality of Lábrea in the province of Amazonas) and a non-free or infected zone (provinces of Alagoas, Amapá, Amazonas, Ceará, Maranhão, Pará, Paraíba, Pernambuco, Piauí, Rio Grande do Norte and Roraima). Since October 2018, the strengthening of surveillance in the area not recognized free of CSF in Brazil led to the detection of suspected cases and confirmation of CSF outbreaks in the province of Ceará and, in 2019, in Piauí. Surveillance aimed at detecting suspected cases of CSF continues throughout the country, movements of animals and products at risk are prohibited from the infected zone to the free zone.

Au Brésil, deux zones de statut sanitaire différent se distinguent au regard de la peste porcine classique (PPC). Une zone indemne (provinces de Rio Grande do Sul, Santa Catarina, Acre, Bahia, Espírito Santo, Goias, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Paraná, Rio de Janeiro, Rondônia, São Paulo, Sergipe, Tocantins, le District fédéral et les communes de Guajará et Boca do Acre, la partie sud de la commune de Canutama et la partie sud-ouest de la commune de Lábrea dans la province de l'Amazonas) et une autre non-indemne ou atteinte (provinces d'Alagoas, Amapá, Amazonas, Ceará, Maranhão, Pará, Paraíba, Pernambuco, Piauí, Rio Grande do Norte et Roraima). Depuis octobre 2018, la surveillance renforcée menée dans la zone non-indemne de PPC au Brésil a permis de détecter des suspicions et de confirmer des foyers de PPC dans la province de Ceará et, en 2019, dans la province de Piaui. La surveillance destinée à détecter des suspicions de PPC se poursuit dans tout le pays, les déplacements d'animaux et de produits à risque étant interdits depuis la zone infectée vers la zone indemne.

Nipah virus encephalitis (Domestic and Wild)	0000	sui	* Qf GSu S

### 4. Unreported OIE-listed diseases during the reporting period

#### Multiple species

Anthrax (Wild)	Aujeszky's disease (Wild)	Brucellosis (Brucella abortus) (Wild)
Brucellosis (Brucella suis) (Wild)	Echinococcus granulosus (Infection with) (Wild)	Equine encephalomyelitis (Eastern) (Wild)
Mycobacterium tuberculosis complex (Infection with) (Wild)	N. w. screwworm (C. hominivorax) (Wild)	Paratuberculosis (Wild)
Surra (Trypanosoma evansi) (Wild)		

#### Cattle

Bov. genital campylobacteriosis (Wild)	Bovine anaplasmosis (Wild)	Bovine babesiosis (Wild)
Bovine viral diarrhoea (Wild)	Enzootic bovine leukosis (Wild)	Inf.bov.rhinotracheit. (IBR/IPV) (Wild)
Trichomonosis (Wild)		

#### Sheep/Goats

Caprine arthritis/encephalitis (Wild)	Contagious agalactia (Wild)	Maedi-visna (Wild)
Ovine epididymitis (B. ovis) (Wild)	Salmonellosis (S. abortusovis) (Wild)	Scrapie (Wild)

#### Swine

Porcine cysticercosis (Wild)	Transmissible gastroenteritis (Wild)	
------------------------------	--------------------------------------	--

#### Equidae

Encephalomyelitis (West.) (Wild)	Equid herpesvirus-1 (EHV-1) (Infection with) (Wild)	Equine infectious anaemia (Wild)
Equine piroplasmosis (Wild)	Glanders (Wild)	

#### Lagomorphs

Myxomatosis (Wild)		
--------------------	--	--

#### Birds

Avian infect. laryngotracheitis (Wild)	Avian infectious bronchitis (Wild)	Avian mycoplasmosis (M.synoviae) (Wild)
Fowl typhoid (Wild)	Infec bursal disease (Gumboro) (Wild)	Mycoplasmosis (M. gallisepticum) (Wild)
Pullorum disease (Wild)		

**Bees**

Acarapisosis of honey bees (Wild)

American foulbrood of honey bees (Wild)

Varroosis of honey bees (Wild)

**Other**

Leishmaniosis (Wild)

**5. Information about other animal type**

Part of data on the OIE diseases for aquatic animals has been sent to OIE
