SECTION I - INTRODUCTION

Subsection I.1 - Legal aspects

1.1. Law No. 9,478/1997 provides for national energy policy and implements other measures, in line with Constitutional Amendment No. 9/1995, which relaxes the way the Federal Government's monopoly is enforced for oil and natural gas exploration and production activities.

1.2. Law no. 9,478/1997 created the National Energy Policy Council (CNPE) with the task of formulating energy policies and guidelines aimed at promoting the rational use of the country's energy resources, in accordance with the provisions of the applicable legislation and based on the principles of preserving the national interest, promoting sustainable development, expanding the labor market, valuing energy resources, protecting the environment, promoting energy conservation, increasing the use of natural gas, promoting free competition, attracting investment in energy production and increasing the country's competitiveness in the international market.

1.3. Law No. 9,478/1997 also established the National Petroleum, Natural Gas and Biofuels Agency (ANP) as the body responsible for regulating, contracting and overseeing the economic activities of the oil, natural gas and biofuels industry. Among other things, it is responsible for drawing up calls for tenders and contracts and holding tenders for the concession of rights to carry out oil and natural gas exploration and production activities, signing the concession contracts resulting from them and overseeing their execution.

1.4. Law No. 12,351/2010 provides for the exploration and production of oil and natural gas in pre-salt areas and strategic areas, which will be contracted by the Federal Government under the production sharing regime.

1.5. Law No. 12,351/2010 delegated ANP, among other duties, to prepare and submit to the approval of the Ministry of Mines and Energy (MME) the draft tender protocols and contracts, and to promote bids for the contracting of oil and natural gas exploration and production activities under the production sharing regime.

1.6. Law No. 12,351/2010, under the terms of article 8, delegated the MME, representing the Federal Government, to enter into production sharing contracts, in accordance with the provisions of articles 19, 20 and 21 of that law.

1.7. Law No. 12,351/2010, under the terms of articles 8 and 45 and article 2 of Law No. 12,304/2010, defined that Pré-Sal Petróleo S.A. - PPSA, will represent the interests of the Federal Government, with the purpose of managing production sharing contracts signed by the MME and managing contracts for the sale oil and natural gas and other fluid hydrocarbons from the MME.

1.8. On November 29, 2016, Law No. 13,365/2016 introduced changes to Law No. 12,351/2010, allowing Petróleo Brasileiro S.A. - Petrobras to express its preemptive right to act as operator of the blocks to be contracted under the production-sharing regime, with CNPE being responsible for proposing to the Presidency of the Republic the blocks to be operated by Petrobras and indicating its

minimum stake in the consortium, which cannot be less than 30%.

1.9. On May 3, 2017, Decree No. 9,041 regulated Law No. 12,351/2010, establishing Petrobras' right of preemption.

1.10. CNPE authorized ANP, through Resolution No. 17/2017, amended by CNPE Resolution No. 27/2021, to define and bid for blocks in any onshore or offshore basins, as well as bid for fields that have been returned or are in the process of being returned, and ANP may conduct permanent bids under the concession regime for these fields and blocks. Under the Production Sharing regime, fields or blocks in the pre-salt area or in Strategic Areas will be tendered as long as they are authorized by a specific CNPE determination defining the parameters to be adopted for each field or block to be tendered.

1.11. CNPE authorized ANP, through Resolutions 26/2021, 04/2022 and 11/2023, to tender the blocks listed in Annex I under the Open Acreage system, under the production sharing regime.

1.12. ANP, exercising the powers granted to it by Article 36 of Law No. 9,478/1997, issued ANP Resolution No. 969/2024, which establishes the procedures for holding bids for blocks intended to grant the exercise of the activities of exploration, rehabilitation and production of oil and natural gas under the concession and production sharing regimes.

1.13. The definitions contained in Article 2 of ANP Resolution 969/2024 are hereby incorporated into this call for tenders.

1.14. This tender protocol defines the rules that must be complied with by all those interested in participating in the Open Acreage of Production Sharing and was prepared in accordance with the relevant provisions of the applicable legislation, including Law No. 9,478/1997, Law No. 12,351/2010, Law No. 13,365/2016, Decree No. 9,041/2017, CNPE Resolution No. 17/2017, as amended by CNPE Resolution No. 27/2021, CNPE Resolution No. 26/2021, Resolution No. 04/2022 and CNPE Resolution No. 11/2023, CNPE Resolution No. 06/2024 and ANP Resolution No. 969/2024.

1.15. Participation in the bidding procedure implies knowledge and acceptance of the rules and conditions set out in this tender protocol and its annexes.

1.16. This tender protocol may be amended to include, exclude and adjust the blocks detailed in ANNEX I, as well as to improve the rules related to the Open Acreage of Production Sharing procedure as necessary, subject to the provisions of Article 10 of ANP Resolution No. 969/2024.

1.16.1. ANP may withdraw blocks from the bidding process by court order or, in a reasoned manner, for technical reasons or in the public interest, as well as blocks where the expiry date of the environmental guidelines is equal to or less the deadline for holding a public bidding session and blocks awarded in one cycle after the signing of the respective contracts.

1.17. Interested parties and bidders should follow the bidding procedure for the Open Acreage of Production Sharing on the website <https://www.gov.br/anp/pt-br/rodadas-anp>.

Subsection I.2 - Open Acreage of Production Sharing Procedure

1.18. The Open Acreage of Production Sharing comprises the continuous offer of blocks located in the pre-salt polygon or in areas defined as strategic, for the purpose of granting the exercise of oil and natural gas exploration and production activities under the production sharing regime. The blocks on offer are detailed in Table 8 of ANNEX I to this tender protocol.

1.19. ANP will conduct the Open Acreage of Production Sharing in its internal actions and may hire external agents to provide support services. The Bidding Round Special Commission (CEL), made up of representatives of ANP and civil society, will conduct the Open Acreage of Production Sharing in its external actions.

1.20. Those interested in participating in the Open Acreage of Production Sharing must apply for registration under the terms of Section IV.

1.21. A bidder will be considered to be one that has had its application for registration approved by CEL and has kept its registration documents up to date in accordance with Section IV.

1.22. The interested party may have access to public technical data and associated supplementary information, under the terms of Section V.

1.23. Bidders may, at any time, submit a declaration of interest accompanied by a bid guarantee for any of the blocks available in Table 8 of ANNEX I, except in cases indicated in item 1.27. The declaration of interest must be accompanied by a bid guarantee, in accordance with Section VI.

1.24. Bidders who do not submit a declaration of interest may only submit bids in a consortium containing at least one bidder who has declared an interest in the respective block.

1.25. An Open Acreage of Production Sharing cycle will be opened with the approval by the CEL of a declaration of interest, and a specific schedule will be established so that bidders can participate in that cycle.

1.26. A new cycle can only be opened after the public presentation of offers for the current cycle has taken place.

1.27. If a new cycle is opened before the end of previous cycles, the blocks awarded in the previous cycle cannot be the subject of a declaration of interest in subsequent cycles.

1.27.1. The awarded blocks whose contracts have not been signed will be available to receive declarations of interest after the end of the cycle.

1.28. ANP may, with good reason, suspend the opening of a new cycle of the Open Acreage of Production Sharing.

1.28.1. During the suspension period, new declarations of interest and bid guarantees will not be accepted.

Subsection I.3 - Open Acreage of Production Sharing Cycles

1.29. Each cycle of the Open Acreage of Production Sharing will consist of all the activities necessary to hold the public session for the submission of bids for blocks that are the subject of a declaration of interest and will also include the qualification of the winning bidders in the public session, the awarding of the cycle's bid, the approval of the cycle's bid and the signing of contracts.

1.30. The declaration of interest that will open an Open Acreage of Production Sharing cycle will be judged by the Special Bidding Commission and its approval will be announced within fifteen working days, extendable for up to the same period, from the date of submission of the complete documentation.

1.31. Only bidders listed in the last list of bidders for the respective regime, under the terms of Section IV, may participate in an Open Acreage of Production Sharing cycle.

1.34.1. Any requests for extensions to the deadlines set out in item 1.33 must be made in writing, in Portuguese, and addressed to CEL no later than 5 (five) working days before the deadline in question.

1.35. To participate in the public bidding session of an open cycle, bidders must comply with the deadlines and conditions set out in points d), (f) and (g) of item 1.33 of the schedules for the respective cycle.

6.22. Bid guarantees submitted by means of letters of credit and guarantee insurance must be valid for at least 360 (three hundred and sixty) days.

6.23. Once the timetable for an Open Acreage of Production Sharing cycle has been defined, the day prior to the date set for the public bidding session should be considered as the start date for the bid guarantee.

6.24. If the date for signing production sharing contracts is extended, bidders with valid bids must renew their bid guarantees within 15 (fifteen) days of the publication of the extension for a minimum period of 60 (sixty) days, under penalty of disqualification, in accordance with paragraph (f) of item 1.47 of this tender protocol.

7.9. During the production phase, each month the contractor will appropriate the portion of production corresponding to the cost in oil, respecting the limit of 80% (eighty percent) of the gross value of production in each of the blocks offered. Costs that exceed these limits will be accumulated for appropriation in subsequent years.

7.10. The deadlines, criteria and conditions for the calculation and appropriation by the contractor of the cost in oil and the volume of production corresponding to the royalties due are set out in Clauses Five and Nine of the draft production sharing contracts in ANNEX XXXII.

7.11. ANNEX XX shows the percentage of surplus oil for the Federal Government based supply,

7.16. This limitation is extended to bidders who are members of the same corporate group, and to bidders who have members of the board of directors (administrators, directors, members of the Board of Directors), partners or accredited representatives in common, unless they demonstrate that they are not acting on behalf of a common corporate interest. Bidders who may fall into these situations should make a reasoned request to the CEL to decide whether they can bid for the same blocks, taking into account the promotion of the competitiveness of the tender.

7.17. The bidder or other bidders from the same corporate group may participate in other consortia to bid for different blocks.

Subsection VII.4 - Criteria for judging offers

If these bidders do not submit new offers or if there is a new tie, a drawing of lots will be used as the tie-breaking criterion, which will take place in public, during the same public session as the presentation of offers, at a time designated by CEL.

Subsection VII.6 - Reopening of the public session for the blocks not awarded

7.25. The permanent sharing offer does not provide for the reopening of the public session for blocks that have not been won.

8.18. The existence of the bidder's registration as a debtor constitutes a fact that prevents qualification, unless the registered bidder proves that it has filed a lawsuit to dispute the nature of the obligation, or its value, and has offered a sufficient guarantee to the court, in accordance with the law; or the enforceability of the credit that is the subject of the registration has been suspended.

Coordinates of Exploratory Blocks in an Open Acreage of Production Sharing

The coordinates are in the SIRGAS 2000 coordinate system and are listed below in text form. The coordinates are to three decimal places, in accordance with the ANP4C Standard.

The boundaries of blocks neighboring contracted areas (converted from SAD 69 to SIRGAS2000) have additional intermediate vertices to ensure their location is more precise. In the list of coordinates, these vertices have their coordinates rounded to the third decimal place of the second, following the guidelines of the ANP4C Standard.

The maps and Shapefile files of the exploration blocks will be made available on the websites www.gov.br/anp/pt-br/rodadas-anp/ and <https://www.gov.br/anp/pt-br/assuntos/exploracao-e-producao-de-oleo-e-gas/dados->.

ANNEX I - Part 2 - Special features of the blocks on offer

Blocks containing reservoirs that extend into areas under concession contracts, production sharing contracts or non-contracted areas, indicated in Table 8 of Part 1 of ANNEX I, as the case may be, must adopt procedures to individualize the production (unitization) of oil and natural gas, under the terms of the applicable legislation, especially ANP Resolution 867/2022, CNPE Resolution 08/2016, and the draft production sharing agreement attached to this tender protocol.

The individualization of production has a number of repercussions on oil and natural gas exploration and production activities in these blocks: the signing of a production individualization agreement, contractual obligations regarding local content, any expenses incurred by concessionaires in the adjacent area if they carry out exploration and production activities in the shared deposit before the production sharing agreement is signed and any appropriate production, among others.

Interested parties must submit to ANP the Term of Commitment Adhere to the Production Individualization Agreement, under the terms of Production Individualization Agreement in force, according to the model in ANNEX XXVII.

The winning bidders who have signed production sharing contracts for these blocks must abide by the terms of the Production Individualization Agreements, if these have been approved by ANP.

To this end, they must sign and send to ANP the Amendment to the Production Individualization Agreement in force, according to model in ANNEX XXVIII, by the date production sharing agreement signed, respecting the deadlines set by CEL in the cycle schedules.

In turn, under the terms of CNPE Resolution 06/2024, Petrobras expressed its interest in being the operator of the blocks indicated in Table 9 of ANNEX I.

Table 9 in ANNEX I consolidates the information on Petrobras' preemptive right, as well as its percentage stake as operator and the stake to be offered for the blocks in the Open Acreage of Production Sharing.

Where:

$\sum c$ = sum of the values for each field offered as a guarantee;

Production = total expected daily production from the committed field, taking into account the percentage of the concession or grant owned by [insert bidder's company name];

PBrent = Reference Price, in US\$/bbl, corresponding to the monthly average of the daily prices of Brent oil, quoted on the PLATT'S CRUDE OIL MARKETWIRE, in US dollars per barrel, for the month immediately preceding the submission of the draft agreement to ANP;

Exchange rate = Official exchange rate provided by the Central Bank of Brazil (PTAX purchase), as at the close of business on the working day immediately preceding the day on which the draft agreement is sent to ANP;

$_{QE}$ = average actual production of the field in the month prior to the measurement;

α_c = multiplier that represents the quality differential between Brent-type oil and the current oil from the field offered as a guarantee, calculated by ANP for the purposes of paying government participations according to the calculation memory of the minimum oil prices for the purposes of paying government participations;

ANNEX XXIX - EQUIVALENCE OF WORK UNITS

For the purposes of complying with the minimum exploratory program (PEM), the following provisions must be observed:

The categories of geological and geophysical exploratory activities to be converted into Work Units (WUs) will be considered for the purposes of complying with the EMP, as shown in the table below.

Table 16 - Description of Exploratory Activities considered for PEM Abatement

Item	Activity Exploratory	Description
(a)	Drilling Exploratory Wells	In order to comply with the minimum exploratory program, the exploratory wells must achieve the main objective approved by ANP when the Well Drilling Notification (NPP) was sent.
(b)	3D seismic surveys	Seismic surveys will be considered for the purposes of complying with the Minimum Exploratory Program, as long as they are limited and within the area of the exploration block.
(c)	3D seismic reprocessing	The reprocessing of 3D seismic data must include the migration of data in time and/or depth. The entire extension of the seismic program contained within the block must be reprocessed. For the reduction of Work Units, only the portion of the reprocessed seismic program contained within the block will be considered. The conversion of Seismic Reprocessing into Work Units is limited to a single reduction request for each original seismic program. The reprocessing of 3D public seismic data includes the migration of data in time and/or depth in the pre-stack phase.

For the purposes of reducing exploratory activities, the equivalence factors in TUs should be taken into account, as shown in the table below.

Table 17- Equivalence of work units to comply with the EMP

Description	Measure	Polygon of Pre-Salt
Unit Financial Value per TU	R\$/UT	R\$ 433.300,00
Exploratory Activity	Measure	TU equivalence
Exploratory well	UT	1.000
3D seismic	UT/km2	0,17
3D reprocessing	UT/km2	0,01

Reduction factor for non-exclusive surveys

For the purpose of calculating the value to be considered for compliance with the Minimum Exploration Program for the Exploration Phase, the value of the TUs corresponding to the exploratory work carried out will be multiplied by the reduction factor, depending on the time elapsed between the request for the rebate and the conclusion of the acquisition operation, under the terms expressed in the table below.

Table 18 - Reduction factor for non-exclusive surveys to comply with the minimum exploration program for the exploration phase
