

SECTION A

LIST OF FIELDS

For the purposes of Article 5.8(6), the Parties agree on the following list of fields:

- (a) safety aspects of electrical and electronic equipment, as defined in paragraph 1 of Section B of this Annex;
- (b) electromagnetic compatibility of equipment, as defined in paragraph 2 of Section B of this Annex;
- (c) energy efficiency of products imported from the European Union into the territory of a Signatory MERCOSUR State, excluding trans-shipments, covered by this Annex; and
- (d) restriction of the use of certain hazardous substances in electrical and electronic equipment.

SECTION B

DEFINITIONS

1. For the purposes of this Annex, the following definitions apply:

- (a) "safety aspects of electrical and electronic equipment" means the safety aspects of equipment which is dependent on electric currents in order to work properly and equipment for the generation, transfer and measurement of such currents and which is designed for use with a voltage rating of between 50 (fifty) and 1 000 (one thousand) V for alternating current and between 75 (seventy five) and 1 500 (one thousand five hundred) V for direct current, as well as equipment which intentionally emits or receives electromagnetic waves of frequencies lower than 3 000 (three thousand) GHz with the purpose of radio communication or radiodetermination, with the exception of:
 - (i) equipment for use in an explosive atmosphere;
 - (ii) equipment for use in radiology or for medical purposes;
 - (iii) electrical parts for goods and passenger lifts;
 - (iv) radio equipment used by radio amateurs;
 - (v) electricity meters;
 - (vi) plugs and socket outlets for domestic use;

- (vii) electric fence controllers;
 - (viii) toys;
 - (ix) specialised maritime, railway, aviation and vehicle equipment;
 - (x) custom-built evaluation kits destined for professionals to be used solely at research and development facilities for such purposes;
 - (xi) construction products, for permanent incorporation in buildings or civil engineering works, the performance of which has an effect on the performance of the building or civil engineering works, such as cables, fire alarms and electric doors; and
 - (xii) machinery defined as an assembly consisting of at least 1 (one) moving part, powered by a drive system using one or more sources of energy such as thermal, electric, pneumatic, hydraulic or mechanical energy, arranged and controlled so that they function as an integral whole, other than ordinary office equipment, audio and video equipment, household appliances, information technology equipment, electric motors, as well as low-voltage switchgear and control gear;
- (b) "electromagnetic compatibility of equipment" means the electromagnetic compatibility (disturbance and immunity) of equipment which is dependent on electric currents or electromagnetic fields in order to work properly and equipment for the generation, transfer and measurement of such currents, with the exception of:
- (i) equipment for use in an explosive atmosphere;

- (ii) equipment for use for radiology or medical purposes;
 - (iii) electrical parts for goods and passenger lifts;
 - (iv) radio equipment used by radio amateurs;
 - (v) specialised maritime, railway, aviation and vehicle equipment;
 - (vi) measuring instruments;
 - (vii) non-automatic weighing instruments;
 - (viii) inherently benign equipment; and
 - (ix) custom-built evaluation kits destined for professionals to be used solely at research and development facilities for such purposes;
- (c) "energy efficiency" means the ratio of output of performance, service, goods or energy to input of energy of a product with an impact on energy consumption during use.

2. For greater certainty, this Annex does not cover whole aircraft, vessels, railways, motor vehicles or their specialized equipment or parts thereof.
